

2026.1 - Apps Library Update

The following apps were added to the [transformable.app apps library](#) recently:

Anytype

Anytype is the open source alternative to Notion or Obsidian - organize any type of data or content locally on Windows, Mac, Linux, Android or iOS, then backup the encrypted Anytype vault to your self-hosted anysync node.

Easy!Appointments

Easy!Appointments is the best way to get started with online bookings, no matter the need. It will work great for single individuals or bigger teams.

Flame

Flame is self-hosted startpage for your server. Easily manage your apps and bookmarks with built-in editors.

Flowise

Flowise provides modular building blocks for you to build any agentic systems, from simple compositional workflows to autonomous agents. Open source agentic systems development platform.

Jellyfin

Jellyfin is the volunteer-built media solution that puts you in control of your media. Stream to any device from your own server, with no strings attached. Your media, your server, your way.

Plane

Project management for teams that prefer shipping over configuring. Plane brings clarity, structure, and flow to your entire org through Projects, Wiki, and AI in one unified workspace.

Seafile

Seafile is an open-source file synchronization and sharing solution designed with efficiency, security, and reliability at its core. Ideal for small businesses that need to keep their data organized and accessible, Seafile offers a robust platform for file management.

Standard Notes

Standard Notes is a free, secure note-taking app with powerful end-to-end encryption, unparalleled privacy features, and seamless cross-platform syncing on unlimited devices.

The [Apps Library](#) has these and more self hosted apps available for quick install and configuration.
