

Install apps with transformable.app

The screenshot shows the 'Create New App' page in the Transformable.app dashboard. The interface is dark-themed and includes a sidebar on the left with navigation options like Dashboard, Alerts, Apps, Servers, Providers, Domains, Apps Library, Account, and Support. The main content area is titled 'Create New App' and contains several sections:

- Application to Install:** A dropdown menu with 'BookStack' selected.
- Server:** A dropdown menu with 'Select Server to Install App on'.
- Application Name:** A text input field containing 'stacks'.
- Site URL:** A text input field containing 'https:// stacks.formable.app'.
- Internal URL:** A text input field containing 'http:// localhost:30160'. A note below it says 'A default Internal URL is suggested based on the application type.'
- Redirect URL (optional):** A text input field containing 'https:// example.com/redirect'.
- Feature Toggles:** Three toggle switches: 'Create Uptime Kuma Monitor' (checked), 'Create Homarr App' (checked), and 'Notifications Enabled' (checked).
- Application Configuration:** A section with four fields: 'App Key' (text input), 'Database User' (text input), 'Database Password' (text input), and 'Timezone' (dropdown menu set to 'UTC').
- Additional Information:** A section at the bottom, currently empty.

Create a New App

Creating a new app on transformable.app creates a Portainer Stack on the Server you select. You can choose from any app in the transformable.app Apps Library. Application Configuration fields are available for each application so you can quickly configure required environment variables for the stack.

Application Name & Site URL

Fill in an Application Name to name your Portainer Stack. Site URL is also required so transformable.app can deploy a site on Forge and activates a Let's Encrypt SSL certificate for it.

Application Internal URL & Port

The Internal URL is auto-assigned a port based on the application you select. The port can be updated if installing multiple copies of apps.

Redirect URL

Redirect URL is optional and will setup Nginx to redirect to the redirect URL instead of loading an app. Select Proxy to setup just a redirect.

The followings options are available for each app:

Create Uptime Kuma Monitor

Automatically create a monitor in Uptime Kuma for this app.

Create Homarr App

Automatically add this application to each Homarr dashboard provider.

Notifications Enabled

Enable email notifications for this app.

Additional Information

Notes can be added for the transformable.app team if you need us to help with app configuration or have any questions.
